

Watch. Practice. Understand. | Lesson 220

Pre Cal 5 1 and 6 1 Unit Circle , Revolution, Arc Length

Watch the matching video: <https://www.youtube.com/watch?v=EjAMXtcqy7k>

Practice focus: Unit circle and exact values

Original extra practice matched to the listed lesson topic.

Name: _____ Date: _____ Show your reasoning and check units.

01 Evaluate $\sin(\pi/6)$, $\cos(\pi/3)$ and $\tan(\pi/4)$.

02 Evaluate $\sin(4\pi/3)$ and $\cos(4\pi/3)$.

03 If $\cos \theta = -3/5$ and θ is in quadrant II, find $\sin \theta$ and $\tan \theta$.

04 Explain why $\sin^2 \theta + \cos^2 \theta = 1$.

Watch. Practice. Understand. | Lesson 220

Pre Cal 5 1 and 6 1 Unit Circle , Revolution, Arc Length

Watch the matching video: <https://www.youtube.com/watch?v=EjAMXtcqy7k>

Practice focus: Radians, reference and coterminal angles

Original extra practice matched to the listed lesson topic.

Name: _____ Date: _____ Show your reasoning and check units.

05 Convert 150° to radians.

06 Convert $7\pi/4$ radians to degrees.

07 Find the reference angle for 225° , and one positive coterminal angle greater than 360° .

08 Find the unit-circle coordinates at $5\pi/6$.

Watch. Practice. Understand. | Lesson 220

Pre Cal 5 1 and 6 1 Unit Circle , Revolution, Arc Length

Watch the matching video: <https://www.youtube.com/watch?v=EjAMXtcqy7k>

Practice focus: Arc length, sectors and angular speed

Original extra practice matched to the listed lesson topic.

Name: _____ Date: _____ Show your reasoning and check units.

09 Find the arc length in a radius-6 circle subtended by angle $2\pi/3$ radians.

10 Find the area of that sector.

11 A wheel turns 30 revolutions per minute. Find angular speed in radians per second.

12 A radius-0.4-m wheel rotates at 5 rad/s. Find its rim's linear speed.

Worked answers | Lesson 220

Pre Cal 5 1 and 6 1 Unit Circle , Revolution, Arc Length

Watch the matching video: <https://www.youtube.com/watch?v=EjAMXtcqy7k>

Practice focus: Unit circle and exact values

Original extra practice matched to the listed lesson topic.

01 Evaluate $\sin(\pi/6)$, $\cos(\pi/3)$ and $\tan(\pi/4)$.

Each follows from special triangles: $1/2$, $1/2$, 1 .

02 Evaluate $\sin(4\pi/3)$ and $\cos(4\pi/3)$.

Quadrant III with reference angle $\pi/3$: $-\sqrt{3}/2$ and $-1/2$.

03 If $\cos \theta = -3/5$ and θ is in quadrant II, find $\sin \theta$ and $\tan \theta$.

$\sin^2 \theta = 1 - 9/25 = 16/25$; positive in quadrant II, so $\sin \theta = 4/5$ and $\tan \theta = -4/3$.

04 Explain why $\sin^2 \theta + \cos^2 \theta = 1$.

On the unit circle $(x, y) = (\cos \theta, \sin \theta)$ and $x^2 + y^2 = 1$ by the distance formula.

Watch the matching video: <https://www.youtube.com/watch?v=EjAMXtcqy7k>

Practice focus: Radians, reference and coterminal angles

Original extra practice matched to the listed lesson topic.

05 Convert 150° to radians.

$$150\pi/180 = 5\pi/6.$$

06 Convert $7\pi/4$ radians to degrees.

$$(7\pi/4)(180/\pi) = 315^\circ.$$

07 Find the reference angle for 225° , and one positive coterminal angle greater than 360° .

Reference angle = $225 - 180 = 45^\circ$. A coterminal angle is $225 + 360 = 585^\circ$.

08 Find the unit-circle coordinates at $5\pi/6$.

Reference angle $\pi/6$ in quadrant II: $(\cos \theta, \sin \theta) = (-\sqrt{3}/2, 1/2)$.

Practice focus: Arc length, sectors and angular speed

Original extra practice matched to the listed lesson topic.

09 Find the arc length in a radius-6 circle subtended by angle $2\pi/3$ radians.

$$s = r\theta = 6(2\pi/3) = 4\pi.$$

10 Find the area of that sector.

$$A = r^2\theta/2 = 36(2\pi/3)/2 = 12\pi \text{ square units.}$$

11 A wheel turns 30 revolutions per minute. Find angular speed in radians per second.

$$30(2\pi)/60 = \pi \text{ rad/s.}$$

12 A radius-0.4-m wheel rotates at 5 rad/s. Find its rim's linear speed.

$$v = r\omega = 0.4(5) = 2 \text{ m/s.}$$
